Lab Scenario – Subnetting, VPC and EC2 instance

Starting from Subnetting to EC2 instance creation

1. I need 60Ip's per network, and we need 33 Networks.
2. __.__.__.__
3. **3rd octet value should be greater than 32**
4. Create VPC for the above Networks and subnets
5. Make Sure IPv6 is enabled all the places including the VM.
6. login with Xshell and putty to the ec2 instance.
