Move the Data Volume to Another Region

1. Create a Data volume of 3 GB.
2. Attach it to the running instance on AWS console
3. Format it and mount it and create some data in this Data Volume.
4. Create snapshot of this Data Volume (3 GB).
5. Copy the Snapshot to another region, (Oregon) where there is already an EC2 instance running.
6. Create volume from this Snapshot in the Oregon region (Make sure to create the volume in the same AZ of the EC2 instance).
7. Attach the Volume to the EC2 instance from the AWS console
8. Mount the Volume inside the Linux Machine and check the data
